

Day Trading and Stock Simulator

Super Satang
Week 7 2022/23

What is day trading?

- Buying and selling assets in the same day in order to gain from small price fluctuations

The three most common day traded assets are...

Stocks

Crypto

FX

How do day traders make big short term gains?

They use leverage/margins

What is this?

Leveraging is...

Let's say Payton wants to invest 10000 baht in AAPL
He wants to make quick short-term gains, so he uses leverages when day trading. He chooses the 5x option.

This means he is essentially trading with 50000 in AAPL
If it goes up 20% he makes 10000 instead of 2000
But... if it goes down 10% he will lose all...

Why is this dangerous?

What do they do?

They focus on making small profits from tiny price changes

They usually do this as a full time job and it is highly stressful – not recommended

It takes lots of capital and is extremely risky

Also... don't forget commissions you have to pay

What should you be focusing on?

Long term

Or

Day trading?

Let's have a go...
